(54) BAG BODY WITH HEADER, AND ITS MANUFACTURE

(57) Abstract:

PROBLEM TO BE SOLVED: To use a bag body as a preservation bag while repeatedly opening/ closing the bag body after separating a header part by providing an opening/ closing means on a lower opening part of the bag body, providing an upper header part and the bag body in a separable manner, and forming a bottom seal part to constitute a bottom part of the bag body opposite to a separating means.

SOLUTION: A pair of chuck tapes 7a, 7b respectively provided with a rib piece 9 and a groove piece 10 are interposed in an opening/closing manner in opening edges 6a, 6b of a lower opening part 6 of a bag body 1. A header part 4 provided with a suspension hole 12 in which a core 3 formed of a thick synthetic resin sheet such as a synthetic paper is sealed by a division seal 5, is formed in an upper part of the bag body 1. In addition, a bottom seal part 13 is formed parallel to the division seal 5, and a separating means 14 is provided by a perforation 15 between the bottom seal part 13 and the division seal 5. A packaged commodity can thus be displayed in a suspended condition, and a user can separate the header part 4 from the bag body 1 and use it as a preservation bag.
